

## Nutrition **Products**

Aqueon aquatic foods and water care products were developed to make it easy to keep fish healthy and energetic, even for the most inexperienced aquarist.

### **Premium Ingredients**

Not all ingredients are created equal. Most fish foods are based on some form of fish meal. The quality of the fish meal is critical and is based on the nutrients it provides. Aqueon Food products use whole fish meal made up largely of salmon, herring and sardines. The term “whole” is exactly what it means; the whole fish is used. Lower grade fish meals use the process waste where the fish fillets or the protein sources of the fish have been removed.

### **Natural Colors and Ingredients**

From the start, Aqueon foods were developed for the health and well being of fish. We accomplished this goal by utilizing natural ingredients and did not add any artificial colors. Flake colors are attributed to the actual ingredients incorporated into each formula, such as green spinach and red chili powder.

### **Healthy Start**

Aqueon Foods have been formulated with ingredients that fish are naturally attracted to, provide a healthy diet, and bring out their true colors. Aqueon Foods will not cloud the water and they allow fish to utilize more of what they eat, creating less waste.
