

Submersible Heaters

Aqueon™ introduces the most accurate, reliable, durable and easy to use aquarium heaters on the market. Available in five sizes/wattages to fit any size aquarium.

Incredibly Accurate

Each heater is calibrated two separate times during production to ensure accuracy within one degree of the temperature setting on the dial. Time-tested design and componentry assures that the heaters will maintain their accuracy over years of use.

Extremely Durable and Guaranteed for Life

Aqueon Submersible Heaters are made from thermal shatter-resistant glass and were designed to absorb impacts, making them extremely durable. All Aqueon heaters come with an unparalleled Lifetime Warranty to back up their unsurpassed longevity.

Easy To Use

The molded control knob is easy to grip, even while wet, and the numbers on the temperature dial are large and easy to read so you can change the temperature setting without removing the heater from the aquarium.

Safe, Long-Lasting and Dependable

The thermal shatter-resistant tube and temperature dial are double-sealed and UL approved for safe, long-term submersion in water. The heater is also programmed to turn itself off when not properly submersed to avoid overheating and damage. An indicator lamp lets you know when the heater is on.

**Available in five sizes/wattages:
50 Watt, 100 Watt, 150 Watt,
200 Watt and 300 Watt.**
