

Water Care

Aqueon™ water care products are designed to provide effective solutions to aquarium setup and use. Simple to understand and apply, these products will help maintain the healthiest environment for your aquatic pets.

Water Conditioner

- Neutralizes the chlorine typically found in tap water, making it safe for fish.
- Helps to reduce the stress on fish as they become familiar with their new environment.
- Aids in restoring the natural slime coat to skin and gills, which can be worn away from netting and transporting fish.
- Detoxifies ammonia and other elements that are released from fish waste.

Water Clarifier

Aqueon Water Clarifier works by clinging to the suspended dirt particles that cause the water to appear cloudy or murky. This makes them easier to filter out or settle to the tank bottom.

Ammonia Neutralizer

Ammonia levels will rise naturally due to the accumulation of fish waste and the breakdown of any uneaten food in water. Harmful ammonia is neutralized and tap water is conditioned for fish after a single dose of Aqueon Ammonia Neutralizer

Water Renewal

Water in lakes and rivers contains renewable trace minerals that are essential for fish and plants to live and grow. In an aquarium environment, these minerals are depleted over time by fish, plants and carbon filtration. Aqueon Freshwater Renewal replaces these biologically essential minerals, restoring water to its natural state and promoting the health, color, and vigor in fish.
